

## Singer Vehicle Design recruiting for new operation in Northamptonshire, UK.

Singer Vehicle Design was formed in 2009 to explore the creative possibilities within the vibrant world of the classic automobile. Singer is dedicated to the passionate study, preservation and optimisation of the world's most respected high-performance vehicles.

Our focus – indeed obsession – has been the pursuit of a meticulously restored and reimagined air-cooled Porsche 911. Our lofty objective to distil, enhance and recombine the strands of greatness that have long marked the Porsche 911 as iconic.

Today, the cars we restore to bespoke commission for our global clientele appear in the world's most prestigious global automotive shows and publications.

Our latest endeavour on behalf of our clients is a Dynamics and Lightweighting Study “DLS” undertaken with Williams Advanced Engineering – part of the Williams Grand Prix Engineering Group. DLS encompasses a selection of restoration and modification services strongly oriented toward lightweighting and dynamic gains.

The restoration of cars for owners who select the Dynamics and Lightweighting Study will be carried out in the UK. As a result, we are looking for talented individuals to join our UK-based operations.

### **Job opportunities available**
